1 Introduction

This report accompanies the Online Panel Study 2017 (doi: 10.11587/I7QIYJ) conducted by the *Austrian National Election Study* (AUTNES) and provides a detailed documentation of the data collection. The six-wave panel focuses on the Austrian National Parliamentary Election held on 15 October 2017.

1.1 How to cite these data

Data users are kindly asked to acknowledge the data and the accompanying release document (Documentation). Please cite the data and documentation as follows:

Suggested citation for the data:

1.2 Changes in Editions

Name of previous and new version

Previous version	New version
AUTNES Online Panel Study 2017 – Version 1.0	AUTNES Online Panel Study 2017 – Version 2.0

Cases dropped

37 cases from wave 6 were dropped as all entries beyond the introductory questions were missing indicating an early breakoff. Among those 37 cases, there were 14 cases that did not belong to the target population (voting age population) and most of these cases had already been dropped in previous stages of the data cleaning process due to non-eligibility.

The study weights and documentation have been updated to account for the change in the number of cases. As the dropped cases included missing values on all substantial questions, results using previous versions of the data set are unlikely to be affected by the removal of these cases. Analyses using weights might be affected indirectly but in minimal ways.

Changed values (DE+EN)

Variable(s)	Previous version	New version
id	Anonymized numerical ID	Anonymized numerical ID (shortened)
age	age = 2017–year of birth	Exact age in years (based on date of birth calculated using the ado “personage” in Stata); top coded age >= 70
age	Missing (.m)	Missing (.)
sd2x2	Age group based on year of birth	Age group based on exact age
sd5	No top coding	Top coded to 8+
sd6	No top coding	Top coded to 5+
w2_q44t_id w2_q45x1t_id w2_q45x2t_id w4_q77t_id w4_q78x1t_id w4_q78x2t_id w6_q45t_id w6_q46x2t_id	Missing (.)	Anonymized numerical ID

w6_q46x1t_id		
w2_q34x1- w2_q34x18	„not mentioned“ = missing (.)	„not mentioned“ = 0

Change in value labels (DE)

Variable(s)	Previous version	New version

2 Conditions of Use

2.1 Restrictions

The data are available for scientific use without restrictions.

2.2 Confidentiality

The AUTNES, its Principal Investigators, and the funding institutions neither take responsibility for the use of the data or interpretations and inferences based on their use, nor do they accept liability for indirect, consequential, or incidental damages or losses arising from use of the data.

2.3 Deposit Requirement

In order to facilitate exchange within the scientific community and to provide the funding agencies with essential information about the use of archival resources, users of the AUTNES data are asked to notify the AUTNES team of publications based on its data.

politics, voting, elections, Austria

4 Study Design

4.1 Sampling

The AUTNES 2017 Online Panel Study surveyed respondents with access to the internet. Respondents were sampled from a pre-existing online access panel provided by Marketagent, Austria. In order to participate in the study respondents had to be Austrian citizens and at least 16 years old or eligible to vote on Election Day 2017. They were selected (quota sample) based on the following key demographics: age, gender, gender X age, region (province), educational level, household size, and population size based on census data (Statistics Austria 2016, StatCube). Hence, the quota sample was structured to closely represent the Austrian population.

We present a comparison of the target population and our different waves according to core demographic characteristics in Table 1 below.

Table 1: Comparison of key characteristics in the sample and population

	Target	W1	W2	W3	W4	W5	W6
Male	0.487	0.498	0.503	0.505	0.503	0.507	0.508

a) RMSE value for demographic variables only. b) RMSE value for both demographic and political variables.

4.2 Field Work

The fieldwork was conducted by Marketagent within the following periods (see Table 2). Table 2 also provides the average interview length.

Table 2. Fieldwork and interview length

Wave #	Fieldwork period	Interview length (in min.)
Wave 1	6 June 2017 – 14 June 2017	[21] / 22
Wave 2	26 July 2017 – 10 Aug. 2017	[20] / 21
Wave 3	30 Aug. 2017 – 14 Sept. 2017	[20] / 21
Wave 4	2 Oct. 2017 – 13 Oct. 2017	[21] / 22, *[33] / *31
Wave 5	17 Oct. 2017 – 27 Oct. 2017	[14] / 16
Wave 6	14 Dec. 2017 – 29 Dec. 2017	[15] / 16, *[19] / *20

(Note: Interview length denotes [median] / mean, excluding interviews > 60 min, *fresh respondents)

4.3 Panel participation

Respondents were asked and incentivized with € 2 to participate in each wave of the panel.

The invitation for necessary “fresh” panelists (if the sample is not sufficiently large, $n < 3000$) is sent out one week after field-work starts. Only panelists from wave 1 and fresh respondents from later waves were invited and reminded of participation in all subsequent waves. Otherwise, respondents who missed a panel wave were not invited any more. All respondents who participated in the previous wave were also invited to participate in the subsequent wave.

Table 3 shows that gross sample sizes and response rates per wave. The variables **panelpat** and **w*_panelist** inform about the individual pattern of panel participation and participation in each wave, respectively.

Table 3. Sample sizes and response rates

	W 1	W 2	W 3	W 4	W 5	W 6
Gross samples sizes (incl. cases excluded ex-post)						
n responded (incl. cases deleted ex-post)	4103	3183	3035	3224	3109	3101
n responded from prev. waves		3183	3035	2908	3109	2935
n responded fresh invites	4103			316		166
Resp. from prev. waves contacted (invites)		4103	4103	4103	4103	4103
Fresh Resp. contacted (invites)	45341			3590		316
Response rates						
RR Resp. from prev. waves		77.6%	74.0%	70.9%	75.8%	71.5%
RR Fresh invited Resp.	9.0%			8.8%		52.5%
n excluded ex-post (fieldwork company criteria)	61	26	16	37	54	21
n excluded ex-post (socio-demographic checks)						22
n excluded (non-eligible resp./breakoff)						37
Number of respondents per wave	4020	3140	2998	3166	3038	3004
Total sample						4453

5 Data Cleaning

5.1 Data protection

All information on postal codes (**sd25**), political districts (**poldis**), the regional constituency (**regwk**), and NUTS-3-Regions (**nuts3code**) were removed from the data set for reasons of data protection. However, postal codes were used to add the categorized population number of the municipality (**popnum**) to the data set.

We also removed the date of birth (**sd2x1**). However, a variable capturing the age of the respondent on Election Day is available in the data set (**age**).

Moreover, we removed the names of political discussants from the data file and replaced them with numerical id variables (**w2_q44t_id**, **w2_q45x1t_id**, **w2_q45x2t_id**, **w4_q77t_id**, **w4_q78x1t_id**, **w4_q78x2t_id**, **w6_q45t_id**, **w6_q46x2t_id**, **w6_q46x1t_id**) to anonymize the data.

Finally, we recoded the following variables for reasons of data protection:

Variable	Variable Label	Original Values	Recoded Version
sd7	HIGHEST LEVEL OF EDUCATION	1 did not attend school 2 did not finish any school 3 elementary school or less 4 primary school/secondary education first stage 5 special school 6 polytechnic institute 7 vocational training/school 8 vocational middle school 9 AHS with diploma 10 BHS with diploma 11 university-related college 12 College 13 Bachelor 14 Magister/Master 15 Doctorate/PhD 16 other	3 did not attend/finish school/elementary school or less 4 primary school/secondary education first stage 6 polytechnic institute 7 vocational training/school 8 vocational middle school 9 AHS with diploma 10 BHS with diploma 11 university-related college 12 College 13 Bachelor 14 Magister/Master 15 Doctorate/PhD 16 other
sd8	RELIGIOUS AFFILIATION	1 Roman-Catholic church 2 Protestant church 3 Islamic religious community 4 Islamic-Alevi religious community 5 Christian-orthodox church 6 Jewish religious community 7 other 8 none	1 Roman-Catholic church 2 Protestant church 3 Islamic religious community 5 Christian-orthodox church 7 other 8 none
sd18	Country of birth, respondent	1 Austria 2 Germany 3 Turkey 4 Serbia 5 Croatia 6 Bosnia 7 Slovenia 8 Poland 9 Czech Republic 10 Russia 11 Hungary 12 other country	1 Austria 2 Germany 3 Bosnia, Croatia, Serbia 4 Poland, Slovenia, Czech Republic, Hungary 5 Other country
sd19	Country of birth, mother	1 Austria 2 Germany 3 Turkey 4 Serbia 5 Croatia 6 Bosnia	1 Austria 2 Germany 3 Turkey 4 Bosnia, Croatia, Serbia 5 Poland, Slovenia, Czech Republic, Hungary

Variable	Variable Label	Original Values	Recoded Version
		7 Slovenia 8 Poland 9 Czech Republic 10 Russia 11 Hungary 12 other country	6 Other country
sd20	Country of birth, father	1 Austria 2 Germany 3 Turkey 4 Serbia 5 Croatia 6 Bosnia 7 Slovenia 8 Poland 9 Czech Republic 10 Russia 11 Hungary 12 other country	1 Austria 2 Germany 3 Turkey 4 Bosnia, Croatia, Serbia 5 Poland, Slovenia, Czech Republic, Hungary 6 Other country

5.2 Quality assurance and excluded respondents

We excluded some cases due to quality issues.

- 1.) Respondents were excluded who exhibited very short response times (interview duration) as well as aberrant response patterns (straight-lining) as identified by the fieldwork company Marketagent. The number of cases is listed in Table 3.
- 2.) Respondents were excluded if the age of the respondent deviated by 2 years (or more) and if gender of the respondent changed (at least once), which was measured at wave 1, wave 3, and wave 4. Hence, both conditions applied. These were $n = 22$ cases in total.
- 3.) By mistake $n = 23$ non-citizens and $n = 4$ respondents below the age of 16 were included in the fresh sample of wave 6 (in total $n = 27$), but were not interviewed. These cases were excluded.
- 4.) Additionally, there were $n = 2$ respondents with values for age in years > 100 . These were defined as missing in age (STATA recoded as = .m).
- 5.) One respondent entered an implausibly large value for the variable household size (sd5). The entry was recoded to missing.

The dataset also includes attention check questions (**w1_q27x5** and **w2_q24x5**, which could be used to identify respondents with lower response quality. However, we refrained from excluding respondents who failed these filter questions.

5.3 Variable format and missing values

All standard socio-demographic variables (both for panel and fresh respondents) are designated by: **sd***

All other questions have the following standard format:

Table 4. Format of variable names

	Wave #	fresh respondents	question #	item #	text/string
abbreviation	w*	f	_q*	x*	t
example	2		24	5	
			= w2_q24x5		

For most variables missing values were coded as follows:

77 = do not know party/person

88 = don't know

99 = refused

6 Weighting of data

The dataset includes several weighting variables which can be used for post-stratification adjustment to known population distributions. For all waves (1-6) two weighting variables are provided:

- demographic weight: **w*_weightd**
The “demographic” weight adjusts to known socio-demographic population distributions only (See Table 1).
- demographic + political weight: **w*_weightp**
- The “political” weight further adjusts for turnout and vote choice marginals using reported voting behavior in the last national election (2013/2017; see also Table 1).

Target distributions are based on Micro Census data 2017 (Statistics Austria StatCube, retrieved August 2020) using the Austrian population aged ≥ 15 having Austrian citizenship as reference population, i.e., a total of approx. 6,316,000 residents. Official election results are provided by the Austrian Ministry of the Interior (<http://wahl13.bmi.gv.at> and <https://wahl17.bmi.gv.at>).

For computing the weighting variables we used the STATA module “ipfweight”. Computation of all weighting variables was limited to a minimum value of 0.20 and a maximum value of 5.00. Missing values in the target variables were weighted neutrally.
